

ABSTRACT OF THE DISCLOSURE

An image information displaying method and apparatus for the edition of a motion picture are disclosed in which representative image representing a series of frame images forming the motion picture are displayed on a screen of a display device and a hierarchical structure based on a plurality of representative images is generated on the screen through an operation using a GUI to perform the edition of the motion picture. A plurality of frame images included in the representative image are subjected to an image detection processing for detecting frame images having a predetermined image recorded thereon. Information indicating the detected frame image having the predetermined image recorded thereon is displayed as a detection result displaying window on the screen. Information concerning frame images having not been subjected to the image detection processing is displayed on the detection result displaying window.
